## BRAINSTORMING AND IDEATION

### Project Title

**Import Data Using Transform Maps (Spreadsheet)**

### Introduction

Organizations often maintain data in Excel or spreadsheet files. Entering a large number of records manually into ServiceNow takes time and can cause data-entry errors. This project focuses on importing spreadsheet data into ServiceNow using **Import Sets and Transform Maps**.

### Problem Statement

Manual data entry is repetitive and time-consuming. It may also result in incorrect or duplicate records. A simple and systematic method is required to transfer spreadsheet data into ServiceNow.

### Proposed Idea

The proposed system uses a spreadsheet as the source of data. The data is imported into ServiceNow through an **Import Set**. A **Transform Map** is then used to map the source fields to the appropriate target fields and transfer the records into the target table.

### Objectives

- To import spreadsheet data into ServiceNow.
- To reduce manual data-entry work.
- To understand Import Sets and Transform Maps.
- To map source fields with target fields.
- To improve data accuracy.
- To verify the imported records.

### Expected Outcome

The expected outcome is a successful spreadsheet-to-ServiceNow data-import process where the source records are correctly transformed and stored in the target table.
