REQUIREMENT ANALYSIS

Functional Requirements

The system should:

- Accept spreadsheet data as input.
- Upload the spreadsheet into ServiceNow.
- Create an Import Set Table.
- Create a Transform Map.
- Map source fields to target fields.
- Execute the transformation.
- Store records in the target table.
- Allow verification of imported records.

Non-Functional Requirements

- The system should be easy to use.
- Data should be imported accurately.
- The process should be repeatable.
- Multiple records should be supported.
- Import errors should be identifiable.

Hardware Requirements

- Laptop or desktop computer
- Minimum 4 GB RAM
- Keyboard and mouse
- Stable internet connection

Software Requirements

- ServiceNow instance
- Google Chrome or Microsoft Edge
- Microsoft Excel or Google Sheets
- Internet connection

Input Requirements

The spreadsheet should contain properly formatted columns and valid records.

Example fields:
Team Name, Team Lead, Email, Department, Contact Number.

Expected Output

The spreadsheet records should be successfully transformed and available in the selected ServiceNow target table.
