PROJECT DESIGN

Introduction

Project design describes the architecture and data flow used to implement the spreadsheet import process.

Data Flow

1. Prepare the spreadsheet with source data.
2. Upload the spreadsheet into ServiceNow.
3. ServiceNow stores the data in an Import Set Table.
4. Create a Transform Map.
5. Map source fields to target fields.
6. Run the transformation.
7. Verify the records in the target table.

Main Components

Spreadsheet: Source of the data.

Import Set: Receives and temporarily stores imported data.

Import Set Table: Contains the imported source records.

Transform Map: Defines how source data is transferred to the target table.

Field Map: Connects source fields with target fields.

Target Table: Stores the final transformed records.

Example Field Mapping

Source Field	Target Field
Team Name	Team Name
Team Lead	Team Lead
Email	Email
Department	Department
Contact Number	Contact Number

Design Goal

The design provides a simple and structured method for transferring spreadsheet data into ServiceNow.
