PROJECT DEVELOPMENT

Introduction

This phase explains the implementation of the project using ServiceNow.

Development Steps

Step 1 – Prepare Spreadsheet
Create a spreadsheet containing the required records and column headings.

Step 2 – Open ServiceNow
Log in to the ServiceNow instance.

Step 3 – Import Data
Open the appropriate data import/load-data functionality and upload the spreadsheet.

Step 4 – Create Import Set
ServiceNow receives the spreadsheet records through an Import Set.

Step 5 – Import Set Table
The imported source records are stored in the Import Set Table.

Step 6 – Create Transform Map
Create a Transform Map by selecting the required source and target tables.

Step 7 – Configure Field Mapping
Map each source field to its corresponding target field.

Step 8 – Run Transform
Execute the Transform Map to transfer the data.

Step 9 – Verify Records
Open the target table and check the transformed records.

Example

Team Name → Team Name
Team Lead → Team Lead
Email → Email
Department → Department
Contact Number → Contact Number

Development Result

The spreadsheet data is successfully processed through the Import Set and Transform Map and stored in the target ServiceNow table.
