PROJECT TESTING

Introduction

Testing ensures that the spreadsheet data is correctly imported, transformed, and stored in ServiceNow.

Testing Objectives

- Verify spreadsheet upload.
- Verify Import Set creation.
- Verify Transform Map.
- Verify field mappings.
- Verify target records.
- Identify transformation errors.
- Check data accuracy.

Test Cases

Test Case	Expected Result	Status
Upload spreadsheet	File accepted successfully	Pass
Create Import Set	Source records available	Pass
Field mapping	Correct target fields populated	Pass
Multiple records	All valid records imported	Pass
Data verification	Source and target values match	Pass
Mandatory field	Invalid/missing value identified	Pass
Duplicate handling	Configured behavior occurs	Pass
Error checking	Errors can be identified	Pass

Testing Procedure

1. Upload a valid spreadsheet.
2. Check the Import Set records.
3. Verify the Transform Map.
4. Check field mappings.
5. Run the transformation.
6. Open the target table.
7. Compare target records with the spreadsheet.
8. Review errors if any.

Final Test Result

The testing confirms that the spreadsheet data can be successfully imported and transformed into the target ServiceNow table.
