PROJECT DEMONSTRATION

Introduction

The final phase demonstrates the complete working project and explains how spreadsheet data is transferred into ServiceNow.

Demonstration Steps

1. Introduce the Project
Explain the project title: **Import Data Using Transform Maps (Spreadsheet).**

2. Explain the Problem
Explain the difficulties of manually entering large amounts of spreadsheet data.

3. Show the Spreadsheet
Display the spreadsheet and explain the source columns.

4. Open ServiceNow
Log in to the ServiceNow instance.

5. Upload Spreadsheet
Import the prepared spreadsheet.

6. Show Import Set
Display the imported source records.

7. Show Transform Map
Explain the source table, target table, and field mappings.

8. Run Transformation
Execute the Transform Map.

9. Show Target Table
Display the final transformed records.

10. Verify Data
Compare the spreadsheet data with the target records.

Final Result

The demonstration shows the complete workflow:

Spreadsheet → Import Set → Transform Map → Target Table

Conclusion

The project successfully demonstrates how ServiceNow **Import Sets and Transform Maps** can be used to import spreadsheet data efficiently, accurately, and systematically.
